

US (AZ): DRONES FOR ARCHAEOLOGISTS, AN INTENSIVE ONE WEEK PROGRAM

Course ID: HIS 489

Session 1: March 14-20, 2027

Session 2: August 15-21, 2027

Session 3: October 3-9, 2027

Academic Credits: 2 Semester Credit Units (Equivalent to 3 Quarter Units)

School of Record: Culver Stockton College

This program does not administer or pay for the official FAA Part 107 Certification Exam. We run a practice exam at the end of the program, so students are prepared to pass the official exam.

We offer three intensive sessions for this program, focusing on drone flying and drone sensors only. Note that data acquired by drone needs interpretation. We strongly urge students to follow up this program with our Photogrammetry field school so you may learn how to process, organize and interpret drone spatial data.

DIRECTOR:

Dr. Kayeleigh Sharp, RPA, FAA Part 107 Certified sUAS Pilot – Assistant Research Professor, Department of Anthropology & Researcher, Radiant Center for Remote Sensing; Director, Digital Archaeology Lab, Northern Arizona University (kayeleigh.sharp@nau.edu)

INTRODUCTION

Drones are an essential tool in today's archaeological practice, both in academic research and professional archaeology (e.g., Cultural Resource Management or CRM, heritage studies or site damage mitigation). Drones save time and money on archaeological surveys, and they also provide excellent high-resolution spatial information for site detection, monitoring and regional landscape studies. Flying a drone is simple when you know how to do it. In fact, you can learn how to do that in just a few hours. The challenging part is mastering flight maneuvers for managing archaeological surveys, site and environmental monitoring and how to handle emergencies in the air.

In this one-week bootcamp-style program, you will gain hands-on experience, learn about drone safety and practice advanced flight maneuvers. You will also learn how to collect accurate and relevant data for a variety of practical applications in archaeology, from photogrammetric modeling of archaeological sites to damage mitigation recording. You will also gain clear understanding of the advantages and limitations of different types of drones and sensors and when they are most applicable.

Through daily lectures and hands-on activities, you will develop and apply skills to become a certified Part 107 drone pilot. During the program, you will be introduced to at least three types of drones and their appropriate deployment (recreational drones, mid-sized quad and or hexacopters, Blue Drones, etc.). You will also learn how to use different types of sensors, when and why to use different them (RGB, multispectral, GPR, etc).

Upon completion, you have the training to successfully complete FAA Part 107 certification exam. You will also have the tools to conduct safe and responsible sUAV fieldwork as a researcher or Cultural Resource Management professional. While this program is designed for archaeologists, professionals conducting paleontological, geological and other landscape surveys may benefit from participating.

IMPORTANT DISCLAIMER

The Anthropocene Research Center was established to support field training in a range of sciences at sites within the U.S. & across the world. Traveling and conducting field work involves risk. Students interested in participating in any ARC program must weigh the potential risk against the value of education provided by the program of their choosing.

Risk is inherent in everything we do, and the ARC takes risks seriously. A committee of leading scholars review each field school location prior to approval. Once a program is accepted, the ARC continually monitors conditions at the program's site and so we can provide an experience that is as safe as possible.

The ARC does not provide trip or travel cancellation insurance. Students are encouraged to explore such insurance policies on their own. Post Covid 19, most basic policies do not cover trip cancelation due to pandemics. If you wish to purchase an insurance policy that covers such contingencies, explore Cancel for Any Reason (CFAR) plans. [Insuremytrip.com](https://insuremytrip.com), [Squaremouth.com](https://squaremouth.com) or [Travelguard.com](https://travelguard.com) are possible websites where students may explore different insurance policies.

Students should be aware that conditions in the field are different than those experienced at home, dorms or college towns. Students will be exposed to the elements, live in rustic accommodation, and expect to engage in daily physical activity.

We do our best to follow schedule and activities as outlined in this syllabus. Yet local permitting agencies, political, environmental, personal, and/or weather conditions may force

changes. This syllabus, therefore, is only a general commitment. Students should allow flexibility and adaptability as research work is frequently subject to modification.

All students must consult medical professionals to ensure they are fit to participate in a ARC field program. ARC is not qualified to provide medical advice. For all other concerns, please consult with ARC staff members or program director(s) – as appropriate.

COURSE OBJECTIVES

In this intensive field school, you will master the technical and regulatory fundamentals, understanding drone advantages and limitations according to updated FAA Part 107 regulations. You will also learn how to carry out safe, non-destructive UAV surveys for specific archaeological and heritage management applications.

This course will take place in Northern Arizona, a little over an hour from the Grand Canyon. Participants will participate in complete bootcamp-style learning activities before moving into the field to refine hands-on skills. For the final practical exam known (aka the ‘Drone AZ Rodeo’), participants will work in aerial survey crews of two-three individuals, rotating among various types of equipment and applying different aerial survey techniques.

LEARNT SKILLS

We are aware and strongly support students who are either currently working or seek employment in the Cultural Resource Management sector – whether with private CRM companies or in government compliance agencies. CRM employers seek to understand the skills students learn at the field school. To that end, we are listing all the skills students will learn during this program. Each skill will be ranked at one of three levels at the end of the field school:

- ✓ **Basic:** Can perform the skill/task with some supervision.
- ✓ **Competent:** Can perform the skill/task without any supervision.
- ✓ **Advanced:** Can perform the skill/task and teach others how to do it.

Students will be trained in the following skills:

Skill	Description
Compliance-Consultation	Ability to understand the interests and conduct consultation with all relevant stake holders, especially those of indigenes communities
Compliance-CRM State Legislation	Understand how to find and comply with individual state legislation, laws and rules concerning cultural and natural heritage
Data Recording	Ability to use printed or digital sheets to document & record field data & complete flight logs
Photography/Photogrammetry	Ability to take clear images of various features, artifact & soil colors at various light and field depth conditions and model archaeological sites or features using Open-Source tools to create 3D models of specific sites or features.
Project Management	Understand the logistics, time management, product and HR needs of field projects
Drone Survey	Able to fly a drone and design systematic land coverage, documentation & survey
Remote Sensing/Terrestrial	Ability to operate near-earth and ground-based physical sensing techniques to produce a detailed image or map of an area
Aerial Map/Plan Making	Ability to plan a drone mission and carry out the flight to produce digital maps and plans of a landscape
Airspace & Sectional Charts	Able to read a sectional chart and plan a flight mission according to FAA regulations

Preflight Checklist	Able to complete preflight checklist as part of professional reporting procedures
---------------------	---

ACADEMIC GRADING MATRIX

Students will be graded based on their work as follows.

80%: Attend and participate in each scheduled day of lecture and field work.

20%: Passage of 70% or more on practice Part 107 exam taken at the end of the session.

COURSE SCHEDULE

Time	Activity
Sunday 6:00-8:00pm	Arrival Dinner, Meet & Greet
Monday 8:30-4:30pm	Lecture/Workshop: Welcome and Getting Started with FAA Part 107 Rules & IACRA registration; Lecture/Workshop: Crew & Resource Management, Weather & Flight Planning
Tuesday 8:30-4:30pm	Lecture/Workshop: Environmental Awareness & Safety, Obstacle Detection & Emergency Procedures & Pre-Flight and Field: Crew Coordination & Communication & Equipment & Basic Maneuvers
Wednesday 8:30-4:30pm	Lecture/Workshop: Map reading workshop, Airspace & VFR Charts and Field: Airspace Navigation & Archaeological Site Survey Practice (30 m and above)
Thursday 1:30-4:30pm	Lecture/Workshop: Airspace Navigation and Field: Near-Earth Site Feature Survey (15 m and below)
Friday 8:30-4:30pm	Lecture/Workshop: Airspace/VFR Charts; Field: Team Site Survey
Asynchronous Exam	Part 107 Practice Exam (1)

** Course schedule may be subject to change upon directors' discretion based on weather conditions or other limiting factors.*

TYPICAL WORKDAY

This course is dedicated to Part 107 instruction and practical training in the field.

Time	Activity
8:00-8:45 am	Getting started with healthy breakfast & hydration
8:45-9:00 am	Equipment check, training & fieldwork begins
10:30-10:45am	Morning break
12:30pm-1:00pm	Light lunch break
1:00-2:15pm	Lecture and/or field work
2:15-2:30pm	Afternoon break
4:00-5:00pm	Flexible end of workday
5:00-6:00pm	Asynchronous study time
6:00 – 9:00 pm	Dinner break & optional socializing activities

** In case of inclement weather days, field work and lecture schedule will be adjusted.*

ATTENDANCE POLICY

The required minimum attendance for the successful completion of the field school is 95% of the course hours. Any significant delay or early departure from an activity will be calculated as an absence from the activity.

An acceptable number of absences for medical or other personal reasons will not be considered if the student catches up on the field school study plan through additional readings, homework, or tutorials with program staff members.

PREREQUISITES

None. This is a hands-on, experiential learning opportunity and participants will study on-site how to conduct archaeological research under the direction of a range of specialists in the field. Field work involves physical work and exposure to the elements and thus requires a strong measure of understanding that this will not be the typical university learning environment. You will have to work outdoors in physically demanding environments, and participants must plan ahead for both cold and hot weather conditions. Participants are required to come equipped with sufficient excitement and an adequate understanding that fieldwork requires real, hard work, in the sun and wind and perhaps even snowy conditions. The work requires patience, discipline, and attention to detail.

TRAVEL & MEETING POINT

We suggest you hold purchasing your airline ticket until six (6) weeks prior to departure date. Natural disasters, political changes, weather conditions and a range of other factors may require the cancelation of a program. The ARC typically takes a close look at local conditions 6-7 weeks prior to program beginning and makes a Go/No Go decision by then. Such time frame still allows for the purchase of competitively priced airline tickets, while protecting students from potential loss of ticket costs if the ARC is forced to cancel this program.

There will be two meeting points for this program:

1. If you fly to Flagstaff Pulliam Airport (FLG), we will meet you at the baggage claims area on the first day of the program (Sun) at 4:00pm
2. If you drive to the field school, make your way to the [Hat Ranch](#) at Williams AZ and arrive on the first day of the program (Sun) by 5:30pm.

If you missed your connection or your travel is delayed, please call, text or email the project director immediately. Local emergency cellular phone contact information will be provided to all enrolled students.

Figure 1: Flagstaff airport plan with meeting area by baggage claim

Figure 2: View of the historic Hut Ranch

MEALS & ACCOMMODATIONS

Students and staff will stay at the historic [Hat Ranch](#) or comparable facility near Williams AZ. Participants are expected to arrive on Sunday evening for check-in and meet-and-greet. Check out is officially Saturday morning. This program provides housing and three family-style meals. Rooms are double or single occupancy, depending on availability and course enrollment.

VISA REQUIREMENTS

This is a domestic program, and no visa is needed for U.S. Citizens.

Non-US Citizens are asked to check the United States embassy website at their home country for specific visa requirements.

PROGRAM ETIQUETTE

Life in the communities in northern Arizona is focused on the outdoors. No excessive or underaged alcohol or controlled substance consumption is allowed at Hat Ranch during the project. We reside on NAU property. Students are expected to obey local laws and are strongly encouraged to observe a 9:00 pm tuck-in time and stay well hydrated in order to start field and lab work early each day.

EQUIPMENT LIST

- A pair of sturdy working shoes (thick-soled sneakers or light-weight hiking shoes) and a comfortable pair of shoes for walking in semi-rugged terrain
- Clothing suitable for outdoor work: a wide-brimmed hat and sturdy lightweight clothing with long sleeves and long pants (to protect against the equatorial sun, insects, and thorns)
- Comfortable house clothes for relaxing after field work.
- Both lightweight jacket and heavy coat as weather conditions change rapidly in northern Arizona. (primarily winter session)
- One or two reusable water bottles (1.5-liter or larger) to ensure proper hydration while out in the field.
- Sunscreen
- A small backpack for your water bottle, snacks, cellular, etc.
- A positive attitude towards work, fun, study, and discovery!

PRACTICAL INFORMATION

International dialing code: 001 (if dialing from outside the US)

Money/Banks/Credit Cards: USD\$

ATM availability: ATM machines are available throughout Williams

Local Language: English

Measure units: degree Fahrenheit (°F), foot/yard/mile, pound (lb), quart/gallon.

Field units: Meter (m.), Gram (gr.)

Time zone: Local time is Mountain Standard time.

ACADEMIC CREDITS & TRANSCRIPT

Attending students will be awarded 2 semester credit units (equivalent to 6 quarter credit units). Students will receive a letter grade for attending this field school based on the assessment matrix (above). This program provides a minimum of 40 direct instructional hours. Students are encouraged to discuss the transferability of credit units with faculty and the registrar at their home institutions prior to attending this program.

Students will be able to access their transcripts through our School of Record – Culver-Stockton College. C-SC has authorized the National Student Clearinghouse to provide enrollment and degree verification (at <https://tsorder.studentclearinghouse.org/school/select>). Upon completion

of a program, students will get an email from C-SC with a student ID that may be used to retrieve transcripts. The first set of transcripts will be provided at no cost; additional transcripts may require payment. If you have questions about ordering a transcript, contact the C-SC office of the registrar at registrar@culver.edu.
